		Refrigerant leakage contributes to climate change. Refrigerant with lower global warming potential (GWP) would contribute less to global warming than a refrigerant with higher GWP, if leaked to the atmosphere. This appliance							
		contains a refrigerant fluid with a GWP equal to 675. This means that if 1kg of this refrigerant fluid would be leaked to the atmosphere, the impact on global warming would be 675 times higher than 1kg of CO2, over a period of 100 years.							
		Never try to interfere with the refrigerant circuit yourself or disassemble the product yourself and always ask a professional.							
+	_	Contains fluourinated greenhouse gases. Importer: Beijer Ref AB
